

5/7/11

Dear Mrs. Martinucci,

For most of my adult life I have taken my good health for granted. It had been well over twenty years that I had not had proper medical attention. As I ushered in my 40's, I became acutely aware of the fact that I needed to get some basic medical screening done.

Over the course of the last several years now, I have undergone various echo's, carotids and nuclear stress tests, not to mention numerous general Doctor's visits. I was always given a general clean bill of health. It wasn't until a respected friend grudgingly dragged me into one of your company's heart screenings. I was skeptical and unprepared for what was to come next. Not only was the staff extremely professional and thorough, but they also made my experience very pleasant and enlightening. They were able to communicate very effectively the importance of early detection and prevention.

Due to the amazing services of Heartscan, I discovered that I had been improperly diagnosed all along. Heartscan was the only medical service to fully realize and discover my condition. Due to your company, I was able to get the proper treatment I so desperately needed to literally save my life. I write this today as a testament to the wonderful services Heartscan provides. And on behalf of my wife and four children we are sincerely and eternally grateful to you for saving my life!

With deep appreciation and kind regards,
