Start
somewhere

Due to our current Medical guidelines, insurance companies, in most cases, require a symptom before the proper screening can be performed.

Heartscan Services focuses on prevention of disease unlike any screening you would get in your annual physical. We have helped save the lives of many through our cutting edge programs.

YOUR FUTURE

Thyroid Cancer rate soaring in wake of 9/11

HSS SCREENING -501c3 FOR 9-11 THYROID CANCER AND THOSE AT RISK
Get the facts! Thyroid cancer is the fastest increasing cancer in the United States.

"If it were not for the thyroid screening you provided, I would not have known I had thyroid cancer- my family and I thank you for what you do ! Thank you for saving my life!"
9-11 Responder

PHYSICIANS CAN NOT FEEL OR SEE NODULES

"Thank you for the screening! My surgeon told me it would have been 5-6 years before I had a symptom, most likely difficulty breathing and by then it would have been spread to my lymph nodes and into my lungs and into my stomach."
9-11 First Responder Fire Fighter - 37 years old

Early detection and screening for thyroid cancer will save lives.

EARLY DETECTION SAVES LIVES.

LET US SHOW YOU WHAT YOUR PHYSICALS CAN'T

EARLY DETECTION SAVES...

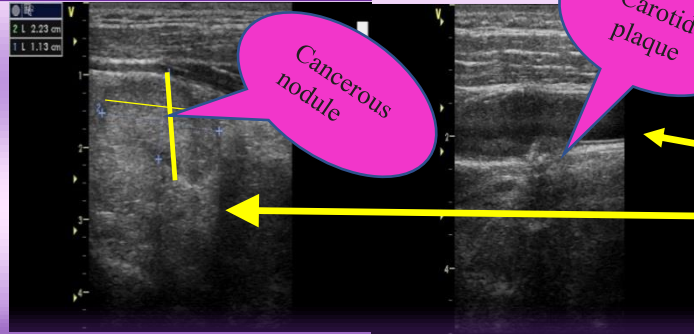

THYROID SCREENING

This test uses sound waves to determine if a nodule is present and if it is solid or a fluid-filled cyst. (The risk of cancer is higher in solid nodules.) This test also monitors the growth of nodules and it helps find nodules that are difficult to feel.

- Thyroid cancer is the top five cancer for 9-11 responders
- Thyroid cancer is the top-five cancer for woman
- It is the fastest increasing cancer in the United States

Carotid Doppler

The major goal of carotid ultrasound is to screen patients for blockage or narrowing of their carotid arteries, which if present may increase their risk of having a stroke

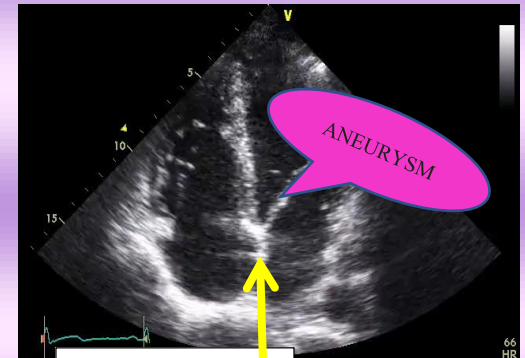

AAA- AORTIC ANEURYSM-

AAA is an abdominal Aortic ultrasound it is a painless screening that can detect AAA, which is vital, since most patients don't show symptoms. This test identifies enlarged abdominal aorta, which may suggest the presence of an aneurysm. A ruptured AAA can cause blood loss, shock and possible death.

ECHOCARDIOGRAM

An echocardiogram is a test that uses sound waves (no radiation exposure) to create a moving picture of the heart. It shows the function, size, shape and movement of the heart muscle. This test can also show how the heart valves are working and how blood is flowing through your heart, evaluation the pumping action of the heart.
